VETERINARY REPORT – REPRODUCTIVE EXAMINATION

Name: Aloisia
Date: 29/04/2019
Signalment: 4-year-old Bay Thoroughbred Mare
Microchip: 985125000071213
Accession: 19CHB-34

On the 29th of April 2019 Aloisia was presented to the Warwick Farm Equine Centre for physical and ultrasonographic examinations of the mare's reproductive tract. The mare was reported not to have been served or pregnant at the time of the examination.

- Aloisia's external genitalia (vulva and udder) were examined, and no clinically significant abnormalities were detected.
 - The vulva was not caslicked.
- The mare was sedated, and the vagina, cervix, uterus, and ovaries were examined via rectal manual palpation and ultrasonographic examination.
 - Two large follicles were visualised on the right ovary.
 - Multiple smaller follicles were observed on the left ovary.
 - No clinically significant abnormalities were detected on the vagina, cervix, uterus, or ovaries.
- The vagina and cervix were visualised per spectrum, with no clinically significant abnormalities detected.

Kind regards,
