The above horse was examined today at the request of Mr Harry Mitchell. The findings of a clinical examination were as follows:

- 1) Sound at the walk
- 2) Had normal hoof capsules and soles
- 3) Observable swellings - joint distension or otherwise:
  - LH small firm lump with small wound below medial splint bottom – Unlikely clinical significance.
- 4) Had normal eyes & vision
- 5) Heart was in normal rhythm
- 6) No parrot mouth or other hereditary defect was observed
