## Veterinary Report

HORSE: Paris Who '20  
Microchip: 985100012180136

The above filly was noted to have discharge from the right ear from an aural cyst whilst residing on the farm in April 2021. The aural cyst at this time was intermittently draining and was only considered to be cosmetic in this weanling. These cysts do not usual progress to being a problem and most will stop draining and exist as a small lump in the ear. Medical management if required is usually unsuccessful and surgical removal is an option if the cyst does become a problem however this is a difficult procedure and would not frequently be undertaken for a solely cosmetic reason.

Any further questions do not hesitate to contact me,

Yours Sincerely,

Emily Wilson BVM&S CertAVP MRCVS
